Shade in Western Hills at 4 p.m. on 15 July

Shadows cast from tree crowns and roofs with the sun 42 degrees up, due west. Roofs are left clear.

Today: 17% of the street edge shaded

With street trees: 78% shaded

Legend

- Ground in shade
- Neighborhood boundary

Over the 2023 aerial photo, faded.

0 — 200 m

N

Both maps 1:8,000

Trees are treated as solid, so this shows where shade falls, not how deep it is. Street edge is the 2 m beside the pavement on both sides.

Lidar: USGS 3DEP, autumn 2021. Imagery: USDA NAIP, 18 October 2023. Boundaries: City of Tucson. finkgeo.com/tucson-canopy
